

Automated Inventory Cycle Count

Our Automated Inventory Cycle Count tool (AICC) provides critical inventory control functions that are missing in Sage ERP. AICC enables your business to quickly and easily verify inventory counts without the need for time-consuming and error-prone manual inventory counts.

AICC automates cycle count generation, including determining what items should be counted every day and sending daily emails to warehouse employees. It helps you **identify and correct inventory errors faster** before they become a major problem.

Compatible with **Sage 100, 300, and 500.**

Features

- ▶ Multi-Warehouse Functionality
- ▶ Daily Inventory
- ▶ Easy Force Counts
- ▶ Filterable Audit Reports
- ▶ Single Screen Setup
- ▶ Integrates with Multi-Bin & Hand-Held Scanning Solutions

"We just about cut our cycle count time in half compared to our old manual spreadsheet method, but more importantly, we've been able to maintain 98% inventory accuracy. That alone saved us about \$80,000 because we did NOT need to shut down production for the typical year-end physical count."

~Melissa McGinnis
ATRO Engineering Systems

Benefits

- ▶ Save Time & Money
- ▶ Identify Discrepancies Faster
- ▶ Eliminate Physical Inventory Expenses
- ▶ No Lost Production Time
- ▶ More Accurate Inventory Counts
- ▶ Reduced Risk of Stockouts & Excess Inventory

Better Inventory Counts. Better Business Decisions.
